

IMAGINARY

SURFER

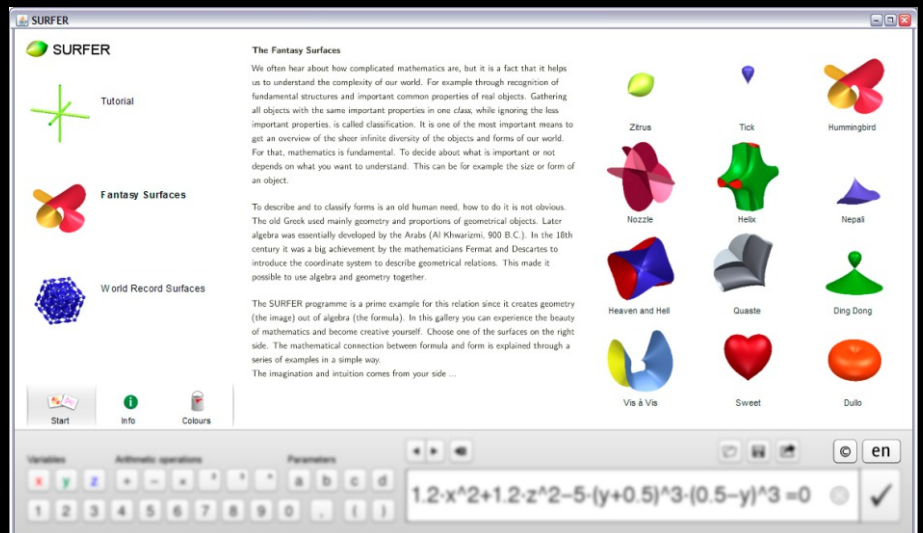

COMPETITION

One of the purposes of the project IMAGINARY through the eyes of mathematics is to encourage exploration of mathematical surfaces, the relations between the formula and its image.

Author:
Oliver Labs

Take a walk through the gallery of surfaces, transform them by changing the formula, or enter a new formula and, by rotating, admire the resulting surface from all the angles.

SURFER is a simple and freely accessible program that allows exploration of relations between the formula and its image - between mathematics and art, in an interactive way. (imaginary.org/program/surfer).

We invite you to collaborate with your picture on the 10-day competition for the coolest surface made with the program SURFER.

- ✦ Send the image and formula, your name, surname and age to mathema@imaginary.org until March 22, 2015
- ✦ There is no restriction to participation
- ✦ The evaluation committee consists of the members of the project IMAGINARY open mathematics and university professors from Ljubljana.
- ✦ The results announcement of the competition will be released on Monday, March 23, 2015 at 2 pm at Krakovski nasip in Ljubljana.
- ✦ The winning image will be on display at the upcoming exhibition IMAGINARY and will be published on the website
